

The background features a complex network of thin, light-colored lines forming a web-like structure. Scattered throughout are numerous small, colored dots in shades of green, blue, and orange. A prominent, darker, reddish-brown geometric shape, resembling a stylized letter 'A' or a complex polygon, is centered in the upper half. The overall aesthetic is technical and data-driven.

Session 4. Discriminative Pattern-Based Classification

Discriminative Pattern-Based Classification

- ❑ Discriminative patterns as features for classification [Cheng et al., ICDE'07]
- ❑ **Principle:** Mining discriminative frequent patterns as high-quality features and then apply any classifier
- ❑ **Framework (PatClass)**
 - ❑ Feature construction by *frequent itemset mining*
 - ❑ Feature selection (e.g., using **Maximal Marginal Relevance (MMR)**)
 - ❑ Select discriminative features (i.e., that are relevant but minimally similar to the previously selected ones)
 - ❑ Remove redundant or closely correlated features
 - ❑ Model learning
 - ❑ Apply a general classifier, such as SVM or C4.5, to build a classification model

On the Power of Discriminative Patterns

- ❑ K-itemsets are often more informative than single features (1-itemsets) in classification
- ❑ Computation on real datasets shows: The discriminative power of k-itemsets (for $k > 1$ but often ≤ 10) is higher than that of single features

(a) Austral

(b) Cleve

(c) Sonar

Information Gain vs. Pattern Length

Information Gain vs. Pattern Frequency

- Computation on real datasets shows: Pattern frequency (but not too frequent) is strongly tied with the discriminative power (information gain)
- Information gain upper bound monotonically increases with pattern frequency

Information Gain Formula: $IG(C | X) = H(C) - H(C | X)$

Entropy of
given data

$$H(C) = -\sum_{i=1}^m p_i \log_2(p_i)$$

Conditional entropy of
study focus

$$H(C | X) = \sum_j P(X = x_j) H(Y | X = x_j)$$

Discriminative Pattern-Based Classification: Experimental Results

Table 1. Accuracy by SVM on Frequent Combined Features vs. Single Features

Data	Single Feature			Freq. Pattern	
	<i>Item_All</i>	<i>Item_FS</i>	<i>Item_RBF</i>	<i>Pat_All</i>	<i>Pat_FS</i>
anneal	99.78	99.78	99.11	99.33	99.67
